2. Qualys User Creation with Roles Configuration

Aim

To create a user account in Qualys Cloud Platform and configure appropriate user roles and permissions.

Procedure

1. Log in to the Qualys Cloud Platform using an administrator account.
2. Navigate to Users / Administration > Users.
3. Select Create User.
4. Enter the required user details: first name, last name, email address, username.
5. Select the required user type/role.
6. Assign appropriate permissions according to the user's responsibilities.
7. Configure access to required Qualys applications/modules.
8. Configure asset/resource permissions if required.
9. Save the user configuration.
10. Verify the newly created user.
11. Log in using the created account or use the administrator view to verify that the assigned permissions are working correctly.

Output

Create User form and role/permission settings
