3. Qualys Cloud Agent Deployment in Windows

Aim

To deploy and activate a Qualys Cloud Agent on a Windows system for asset discovery and continuous security monitoring.

Procedure

1. Log in to the Qualys Cloud Platform.
2. Navigate to the Cloud Agent application.
3. Go to Activation Keys.
4. Create or select an appropriate activation key.
5. Download the Windows Cloud Agent installer.
6. Transfer the installer to the target Windows machine.
7. Open Command Prompt/PowerShell as Administrator.
8. Run the Qualys Cloud Agent installer.
9. Provide the required activation/customer information according to the generated Qualys installation instructions.
10. Allow the agent to communicate with the Qualys Cloud Platform through the required network connection.
11. Start/check the Qualys Cloud Agent service.
12. Return to the Qualys console and open Cloud Agent > Agents.
13. Verify that the Windows machine appears as an activated agent.
14. Check the agent's status and last check-in time.

Output

Activation key
